

GLOBAL CHEMICAL REGULATORY SUPPORT

Single point of contact for compliance in multiple jurisdictions

The chemical regulatory arena is changing rapidly and companies shipping worldwide need to keep up to date with regional or national regulations to maintain compliance. Some countries have live requirements in place, such as South Korea, China, Japan, Switzerland, and Turkey, while many emerging regulations require careful monitoring and preparation work.

We determine where obligations exist within clients' supply chains and ensure their timely execution. Our experts help companies comply with requirements for placing on the market new and existing chemicals in Asia, Australia, Europe, and North America.

Our international chemical compliance services

- **Programme management:** tracking the main requirements based on the client's portfolio and target international markets to determine obligations and timely execution through a single point of contact
- **Scoping:** determining various considerations for a particular country, including registration/notification, reporting and safety data sheet requirements, exemptions, thresholds, and reviewing inventory databases
- **Regulatory tracking:** dedicated module within Landbell Group's proprietary compliance platform, element1™, for managing and tracking international regulations

Customer benefits

- Single point of contact for compliance in multiple jurisdictions. Our network of own offices and trusted partners allows us to support customers globally. With offices in the US, we provide complete support with North American obligations
- Creating sustainable compliance strategies
- Proactively addressing supply chain risk
